

Managing fraud better, together.

Combine two powerful solutions to reduce fraud, increase approvals, and provide a superior cardholder experience.

Explosive growth in digital sales can increase fraud risk and false declines.

Visa Advanced Authorization (VAA), powered by Visa’s AI platform, is used around the world to detect fraud and improve authorization.

- Provides easy-to-use, in-flight risk scores
- Harnesses global data and fraud trends from trillions of VisaNet transactions
- Analyzes 500+ unique attributes³ and 2 years of account history
- Used by 8,000+ global financial institutions

Visa Risk Manager (VRM) turns the insights of VAA into action—streamlining and enhancing your fraud operations.

This web-based suite of tools gives you greater control and flexibility in deploying your risk strategies and managing risk tolerance.

- Create, test, and publish authorization rules within minutes
- Access 70+ additional transaction parameters to VAA’s existing risk scoring
- Enable case management for specific card accounts, whitelisting and blacklisting, and reporting functions

It’s allowed us to stop a lot of compromises, detect a lot of fraud but more importantly let a lot of transactions go that are legit.

Head of Fraud Operations, FNB – South Africa

Visa Advanced Authorization + Visa Risk Manager. They add up to more.
